

DVL0542-AC-2834RGBW is a full touch RGBW LED controller designed with double touch sliders which offer fast and accurate RGB color tone adjustment and independent brightness dimming of RGB channel and W channel. Designed with double touch sliders, one for RGB color tone adjustment and the other for brightness adjustment of RGB channel, the touch controller can control RGB color and RGB brightness respectively without having to switch. W channel can be controlled independently by the "W" key, thus RGB channels and W channel can be controlled separately without any confusion. Each controller can control 1 zone with endless receivers in each zone and up to 3 different colors or scenes can be saved for each zone. 10 built-in color changing effects are available with pause function. LED indicators for back lighting enable users to find the controller easily even in the dark. While receivers are working with WiFi-RF converter, they can be controlled by WiFi via installing APP on IOS and Android systems. Standard European size and American size are optional.

Key Features

- Much thinner ultra sensitive high strength glass touch panel with double touch sliders and back lighting
- Ideal for RGB+W LED lighting
- Double touch sliders, one for RGB color tone adjustment and the other for brightness adjustment of RGB channels
- Control RGB color and RGB brightness respectively without having to switch
- Control 1 zone with endless receivers in each zone
- Save up to 3 colors/scenes for each zone
- RGB channels and W channel can be controlled separately without any confusion
- 10 built-in color changing effects are available with pause function
- LED indicators for back lighting enable users to find the controller easily even in the dark
- To work with power repeater to expand output unlimitedly
- Remote control over 20 meters
- Receivers can work with WiFi-RF converter after installing APP on IOS and Android systems
- Standard European size, American size optional
