

Push button DALI control panel DVL0542-AC 2422K4-CCT-G1 is a dual color DALI DT8 controller that controls 2 channels output (warm white and cool white) via a single DALI address. The panel controls 1 group address. The group of devices on DALI circuit to be controlled can be assigned manually by rotary switch on the back. The panel through broadcast can control all DALI devices on the circuit. The DALI panel enables dimming commands and DT8 commands to be sent to the selected group. DT8 commands enable easy color temperature adjusting for the dual color LED lights. It is compatible with universal DALI masters that support DT8 commands and controls DT8 devices. It is easy to use and no configuration by computer required. Compatible with existing standard size frames from Berker, Merten, Gira, the DALI push button controller can be wall mounted easily.

### **Key Features**

Dual Color Push Button DALI DT8 Control Panel

4 Button Design with Group Control

Controls DT8 devices

Controls 2 channels output (warm white and cool white) via a single DALI address
